

### Private and Public School Enrollments

Since schoolchildren across Connecticut are looking forward to summer vacation, we have chosen to highlight school enrollments in this month's User News. The numbers of children enrolled in private and public schools is available for the Census years of 1990 and 2000 only—current year estimates and five-year projections are not available. In order to obtain this data, create a new rank report. The 2000 data is found in the "Basic Variables 2000" category with variable names in the "School Enrollment" section. Similarly, the 1990 data is found in the "Basic Variables 1990" category, and the variable names all begin with the phrase "School Enrollment."
